

An update on the Notes From
Nature project:
Bringing a proof of concept into full
production

R.P. Guralnick, M.W. Denslow
SPNHC 2015

Introduction

- Notes from Nature (NFN) is a citizen science transcription project launched in April 2013 as part of the roster of successful Zooniverse projects.

ZOONIVERSE

Proof of Concept

- Museum digitization in a citizen science framework?
- Represent multiple material types?
- Provide an engaging experience for volunteers?

The background of the top section is a dense, overlapping collage of aged, yellowish-brown paper records and tags. Some tags are tied with string, and there are small blue and green objects interspersed among the papers. The overall texture is busy and historical.

Archives available

1,112,160

Total transcriptions

7,563

Users contributing

Herbarium Interface Statistics

- 2227 transcriptions per week (mean)
- 483 users per month (mean)
- Effort has a skewed distribution of users
 - Most <100
 - Some power users (>16,000)

Herbarium Interface Statistics

- Average time
 - Herbarium 3:39
 - Most are much faster (~2 minutes)
- Tremendous amount of volunteer effort!

Current Limitations

- Open ended projects
- Output requires processing
- Transcription methods may not be most efficient
- Improved user engagement

Upcoming Advancements

- More meaningful tasks
 - Read and select metadata
- Improved transcription efficiency
 - Fewer transcriptions?
 - Transcribe once then validate

Upcoming advancements

- Transcription cleaning service
 - Consensus based output
 - DwC Archive
- Improved user experience
 - User selected content
 - External content (MoL, EoL)
 - User dashboard

SPNHC 2015 Abstract

- We discuss forthcoming improvements for: 1) Creating more meaningful provider- and user-generated “expeditions,” or sets of images based on themes; 2) Tools to build consensus and quality metrics for the transcriptions to further enhance data quality; 3), Better workflows to support image loading and repatriation of data to our providers. We also discuss engagement efforts and interoperability with other biodiversity informatics tools. Such improvements help NFN take its place as a critical component of an ecosystem of tools needed to unlock the vast legacy biodiversity data for broad public good.
