DISCUSSION SESSION: Increasing the research-readiness of biodiversity collections data

1. What data quality issues are most frustrating to and/or most consequential for researchers using biodiversity specimen occurrence data?

2. Do researchers prefer to acquire data from aggregators or collections directly?

3. How can we increase trust in biodiversity specimen data?

4. What solutions could we prioritize at the collections source level?

5. What solutions could we prioritize at the aggregator level?

6. What solutions could we prioritize at the research end-user level?
