

Digital Assets Management via MCZbase at the Harvard Museum of Comparative Zoology

MUSEUM OF COMPARATIVE ZOOLOGY

HARVARD UNIVERSITY

Brendan Haley, Paul Morris, Linda S. Ford & James Hanken

Quick History/Overview of MCZbase

- Installed in 2008 as sole collections data management system for MCZ, including Special Collections; ten collections migrated by 2011.
- Third, originally identical instance of Arctos platform; subsequently managed and enhanced independently at MCZ.
- Data types include primary voucher specimen information (e.g., Darwin core), plus cryo samples, gene sequences, audio and video recordings, primary literature, fieldnotes and images (2D and 3D).
- Links to data aggregators: iDigBio, GBIF, EOL, etc.
- Dynamic linking with GenBank, BHL, special projects and other museum records.
- 2,204,308 records as of 21 January 2020.

Under the Hood

- MCZ storage and MCZbase servers (development and production) maintained by Harvard FAS Research Computing (FASRC).
- Database housed on Dell PowerEdge R440 server running Oracle 11g; web-based front-end application runs in Coldfusion11 on separate virtual machine.
- FASRC storage is “highly available networked storage application” (Lustre Network Storage).
- MCZbase software: GitHub used for collaborative development; Zenodo used for archiving software versions.
- Full DB export archived biweekly on FASRC storage.
- Snapshots of MCZbase dataset (Darwin Core Archives produced by IPT) will be deposited to Harvard Dataverse (Harvard University Library Systems).
- Specimen/occurrence data, media metadata and metadata for discovery are shared through MCZ's IPT instance.
- DB bug reports done via Bugzilla; DB project management done via Redmine.

Operational Assumptions of the MCZ

- Responsible for own material (historical and future)
 - Depository of record for specimens, metadata and augmented data
 - Responsible for tracking specimen usage
- Collaborate robustly with research and specialized projects
 - Encourage enhancement of MCZ data
 - Tether enhanced data back to original specimen data
- Integrate seamlessly among internal, external within Harvard, and external resources
 - Increases discoverability and usability of data
 - Allows dynamic linking with open software as new resources emerge
 - Ensures conservation of original material, plus data consistency and integrity

DAM & DB Handling

- Internally through MCZbase
 - Leveraging the media module to track metadata, provenance, file location and integrity (md5/hash)
 - Independent full archival DAM (e.g., Fedora, DSpace) under review to enhance current system
- Fully integrated DAM and collections data management (will not change with enhancement)

Media Handling (2D, 3D, etc.)

- Criteria for handling depends on desired functionality
- May be linked internal, external (w/in Harvard) and external
- 2D
 - Internal: specimen images, x-rays, audio, video and digital microscope images (Keyence)
 - External (w/in Harvard): DRS for ledger scans and fieldnotes; SlideAtlas for microslide scans (open in Girder)
 - External: BHL for publications
- 3D
 - Internal: 3D PDFs of microCT and CT scans
 - External: MorphoSource, Aves 3D

Collection/Department Handling

- Centralized collection DB structure
- Museum-wide protocols recognize idiosyncrasies of different disciplines
 - Facilitate management and unified addressing
 - Ensure scalability
- Internal consistency allows for common-point connection
 - Increases efficiency, response time, unified data sharing (e.g., IPT) and shared goals and initiatives

Girder: a data management platform

[circleci](#)[passing](#)[license](#)[Apache 2.0](#)[gitter](#)[join chat](#)[discourse](#)[forum](#)[coverage](#)[90%](#)[GitHub](#)[161](#)

What is Girder?

Girder is a free and open source web-based **data management platform** developed by [Kitware](#) as part of the [Resonant data and analytics ecosystem](#). What does that mean? Girder is both a standalone application and a platform for building new web services. It's meant to enable quick and easy construction of web applications that have some or all of the following requirements:
