Assistant Project Manager

Position Description
The newly established National Center for Digitization of Biological Collections (iDigBio), centered at the Florida Museum of Natural History and funded by the U.S. National Science Foundation, will develop an integrated national infrastructure for digitization of biodiversity collections housed in U.S. institutions as part of the Advancing Digitization of Biological Collections project (ADBC). The resource will provide access to information critical to scientific research and education, including that designed to understand biodiversity and societal consequences of climate change and other environmental issues. A full-time assistant project manager will be hired to work with the director and other senior personnel of iDigBio to ensure efficient and effective completion of project goals and objectives.

Essential Functions
Develop a project management plan, including risk management and avoidance of conflicts of interest, to ensure efficient and effective completion of ADBC’s project goals and objectives. Define and organize the project’s tasks to optimize the allocation and integration of resources necessary to meet project objectives without exceeding the resources available to the project. Revise, prioritize and update plans as needed in consultation with and at the direction of the iDigBio Director and other members of senior management team: 20%.

Manage workflows and solve problems related to scope, time and cost of the project, at iDigBio and at participating institutions to establish efficient and effective strategies and methods as described in the project management plan: 30%.

Monitor activities at all collaborating institutions and report on a regular basis to iDigBio Director and other members of senior management team on the progress of ADBC in meeting goals and objectives: 10%.

Establish effective means of communication within iDigBio and with participating institutions: 10%.

Provide the framework and oversight for detailed cost estimating and control: 10%.

Prepare and submit reports to NSF and others as requested: 5%.

Participate in promoting and coordinating outreach activities for research, education: 5%.

Perform other relevant tasks as requested by the project administrators: 10%.
Minimum Qualifications
Master's degree in an appropriate area of specialization; or a bachelor's degree in an appropriate area of specialization and two years of appropriate experience.

Preferred Qualifications
Formal training and/or experience in project management necessary to organize and manage resources for the successful completion of project goals and objectives. This may include a university degree in project management, a business degree with some level of project management emphasis, or certification preparatory classes and training in project management. Relevant experience with one or more large projects is highly desirable. Must have the ability to organize and communicate effectively with a diverse clientele, including scientists, IT experts, and users of biological collections information.

Familiarity with information technology projects and use of biological collections in research and education is desirable.
