

**Paleontology Digitization Workshop:  
Vertebrates, Invertebrates, Plants  
September 23–26, 2013  
Yale Peabody Museum  
New Haven, CT**

This workshop is the fourth in a series of preparation-specific workshops focusing on organizing, launching, maintaining, and enhancing a biological collections digitization program. The primary goal is to prepare participants with the necessary skills and knowledge to launch or maintain a digitization program individually, through collaboration with an existing Thematic Collections Network (TCN) or Partner with an Existing Network (PEN), or through collaboration with iDigBio. The target audience includes paleontology collections managers, curators, and directors.

Workshop topics will include but are not restricted to: 1) an overview of iDigBio, NSF's ADBC program, and nationwide digitization activities; 2) strategies for organizing and launching a digitization program; 3) digitization modules and tasks; 4) strategies for developing effective workflows and protocols for paleo digitization; 5) strategies for evaluating hardware and software, including database management systems; 6) procedures for image and data capture tailored to paleo specimens; 7) a paleo-focused introduction to tools and techniques for georeferencing, and 8) strategies for moving digitized data to the internet via iDigBio and other data aggregators and harvesters. Sample workflows, hardware specifications, and comparison software features will be available during and following the workshop through a workshop wiki. As much as practicable, workshop sessions will focus on practical application and demonstration.

Workshop planning team members include: Susan Butts (Yale Peabody), Una Farrell (Biodiversity Institute, U. Kansas), Austin Hendy (Florida Museum of Natural History), Talia Karim (Museum of Natural History, U. Colorado at Boulder), Gil Nelson (iDigBio), Chris Norris (Yale Peabody), and Jessica Utrup (Yale Peabody).
